Reasons for allowance

The following is an examiner's statement of reasons for allowance:

The present invention is drawn to a radio frequency integrated circuit utilizing a receiver section, transmitter section and transmit/receive switch. The transmitter section includes mixing module, power amplifier, bandpass filter and transmit signal strength indication module, wherein the transmit signal strength includes a peak detection circuit and a peak to power conversion module. The peak detection circuit including an input coupling circuit, a rectifying operation amplifier and a low pass filter, wherein the rectifying operation amplifier including first input transistor, second input transistor, rectifying transistor, current source, first active input load transistor, second active input load transistor, active output load transistor, output transconductance stage recited in claims 1-19. None of the prior art disclosed or suggested to show the particular structure and/or the particular operation recited in these claims namely: the details of "the rectifying operation amplifier: the first input transistor, the second input transistor, the rectifying transistor, the current source, the first active input load transistor, the active output load transistor and the output transconductance stage" in combination with "the input coupling circuit" as recited in claims 1 and 12; the details of the "rectifying operational amplifier: the first input transistor, the second input transistor, the rectifying transistor, the current source, the first active input load transistor, the active output load transistor and the output transconductance stage" as recited in claim 9;

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
